

POWERCOM

ENGINEERED COMMERCIAL SOLAR

GET SOLAR WORKING FOR YOUR BUSINESS!

Solar power makes great sense for business.

Businesses that consume power during daylight hours benefit by consuming all the solar power they generate. The cost savings in reduced electricity grid power consumption are direct to the business.

At POWERCOM we have developed unique software that identifies the optimum solar power production volume for any business.

Inland Fisheries Service (IFS), Business Manager and Deputy Director, Tony Wright said "The 50kW system installed at the Inland Fisheries Service head office and hatchery reduced the total energy costs of the IFS by about 20 per cent. We are adding another 30kW to the capacity of the current system later this month to offset this even further."
